

# FingerSnap.org – Blockchain based Q&A Platform

Whitepaper V1.0

# Abstract

Web applications for questions and answers have a great tradition. They are often provided on corporate and technical websites. But there are also special offers for a general community. Users can ask questions on these platforms. The answers will be read or received by experts and answered. This type of application is especially useful for answering questions about specific industries or topics. By regularly answering questions or sharing opinions with other professionals, users can achieve lasting positive learning effects

Now blockchain technology is making its way into this industry.

**Welcome to [FingerSnap.org](https://FingerSnap.org)**

# What is FingerSnap?

FingerSnap is a Q&A community platform that aims to decentralize this market through advanced blockchain technology. A unique Token reward system based on the NTP1 standard (Neblio token protocol) is the driving force. Sharing knowledge will be rewarded again. With the help of this technology, we will visualize smart minds and their appreciation through the Peer to Peer Network! Good questions are also involved in our system. Earn/spend Token via Up - and Downvotes to provide consistent high quality content. This is done by our own FST Token (FingerSnap Token)

# Market Overview / Top 3 Q&A Platforms

With this little graphic we wanted to illustrate how big the Q & A market really is. We have been looking for 3 large platforms. Of course, we also informed in advance about integrated bonus programs or similar. But what we are planning at FingerSnap is absolutely new for the whole market! A decentralized reward system for community members. Thanks to the help of blockchain technology, this could become reality soon.

# What is Neblio?

Neblio is an open-source, decentralized, and secure blockchain platform built for enterprise-level applications and services. Neblio is a proof-of-stake (PoS) blockchain secured through staking the NEBL coin.

Neblio's vision is focused on simplicity. They offer easy integration of new and existing legacy applications into the Neblio blockchain through REST APIs in eight different languages. The Neblio blockchain supports tokenized assets through Neblio Token Protocol-1 (NTP1). Neblio's large block size allows for individualized token metadata, high data flexibility and high transaction throughput.

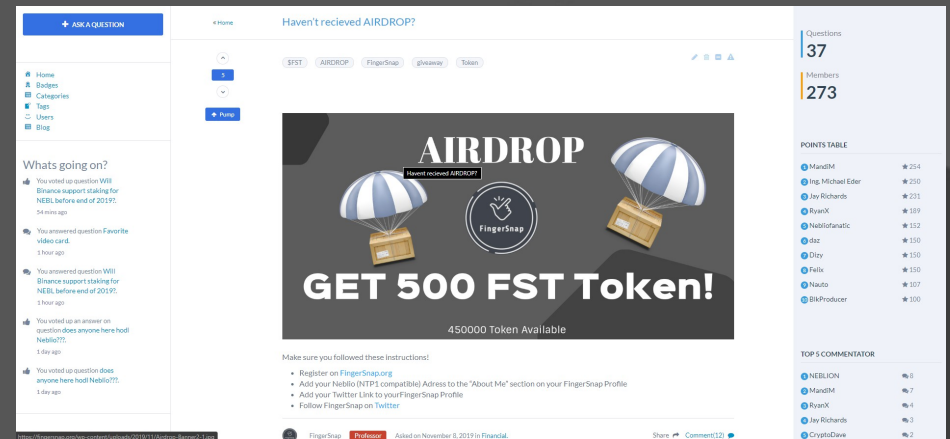

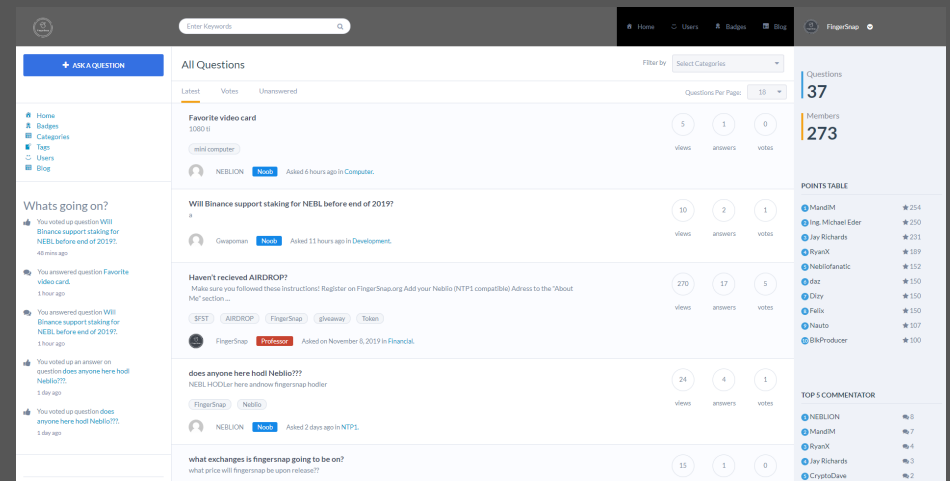

„Neblio and the technology behind it guarantee us a high degree of flexibility in terms of development as well as potential future expansion“

- Jens Breymann,

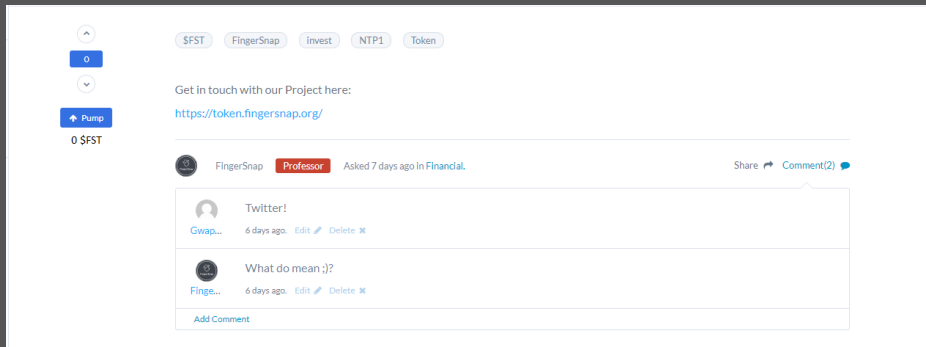

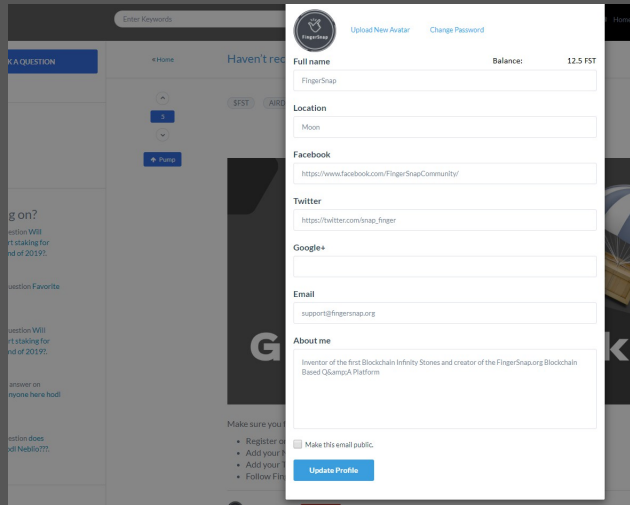

Founder FingerSnap.org

# FingerSnap Features / Current Status

- USER can post questions in public feed
- USER can answer and comment questions
- USER can rate questions and comments via up and down vote
- USER has a public profile with basic information
- Website rewarding points depending on the USER's activity intensity
- Earned points unlock "badges" that expand the user's scope of action
- With the help of the "Pump" function, the user push his questions in the on top of the public feed. "Pumps are chargeable at an interval <240min

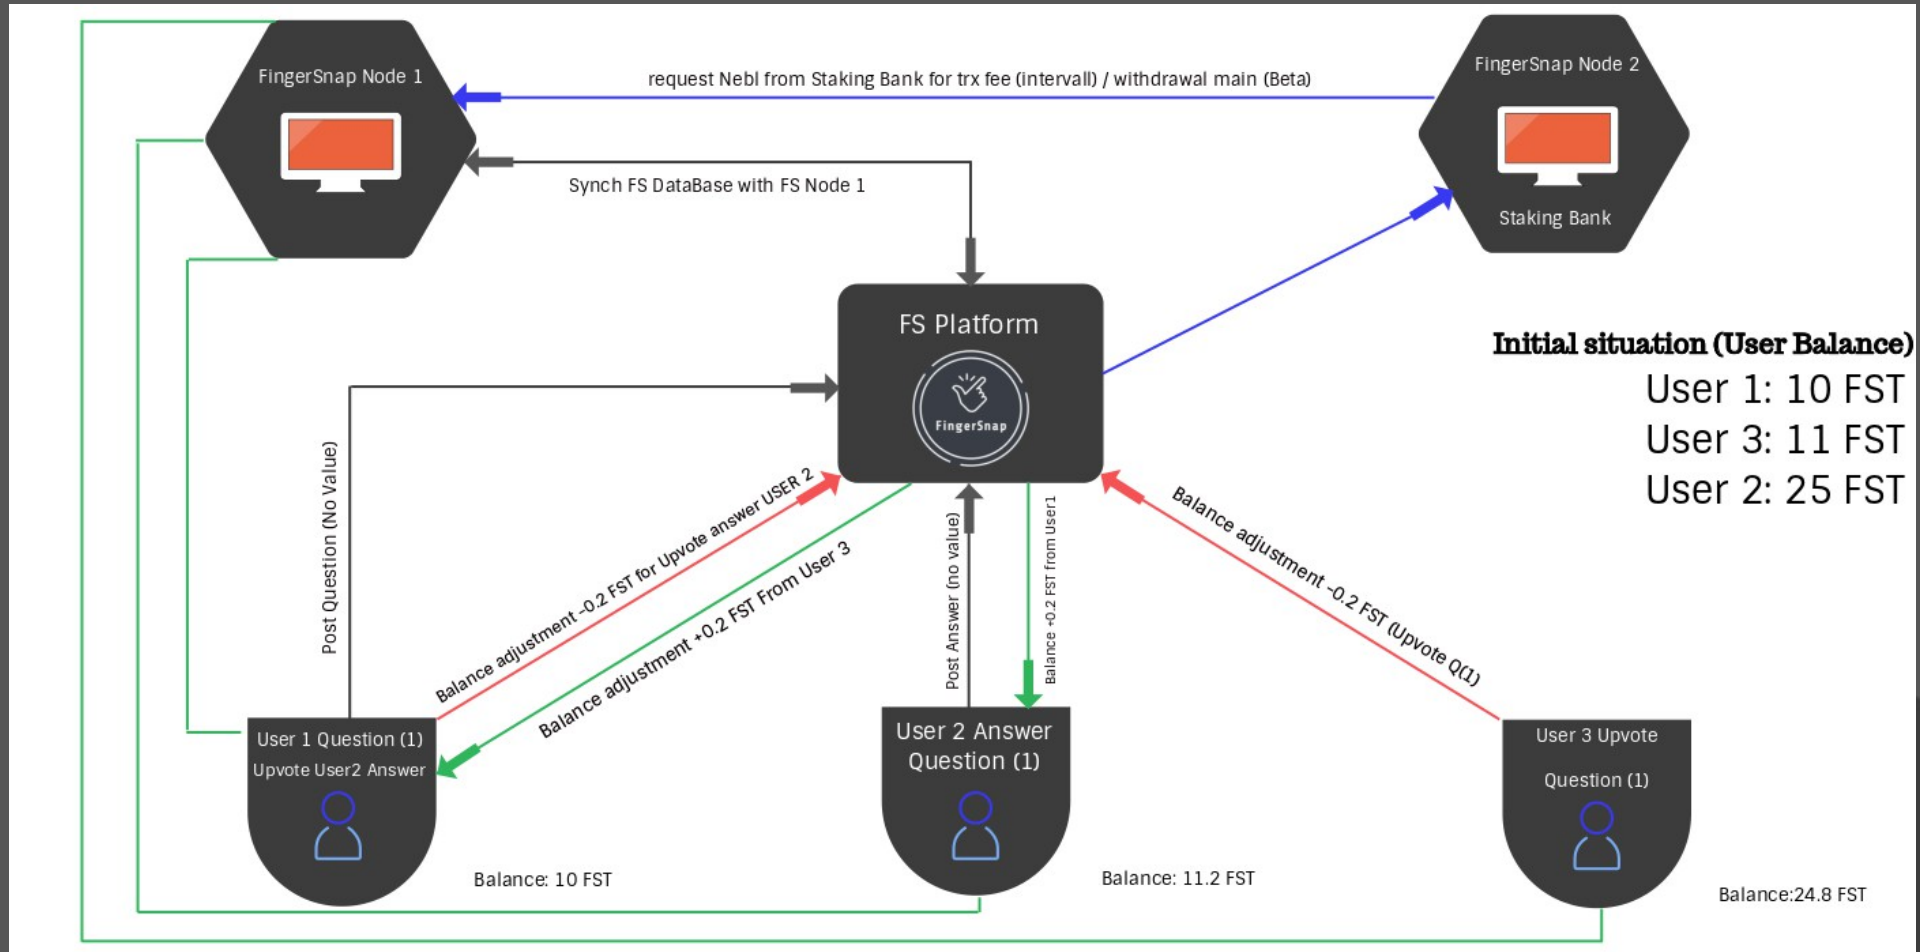

# FingerSnap Changes / NTP1 Intergration

- USER gets his own Neblio / NTP1 address on his profile
- Address will be part of the "FingerSnap" Neblio Node (only in Beta)
- USER can manage Deposits and Withdrawals from his Profile
- User triggers transaction by interacting with the Upvote Button. Upvote will be set to a fixed 0.2 FST Value (Beta)
- Public Counter shows total earned FST Token
- Reciever has instant access to his Token
- Downvotes will NOT be punished
- "Pumps" and comments are not considered in the new system for now

# How it works / Example (BETA)

# Token Distribution

## Detailed Listing / Before public Sale

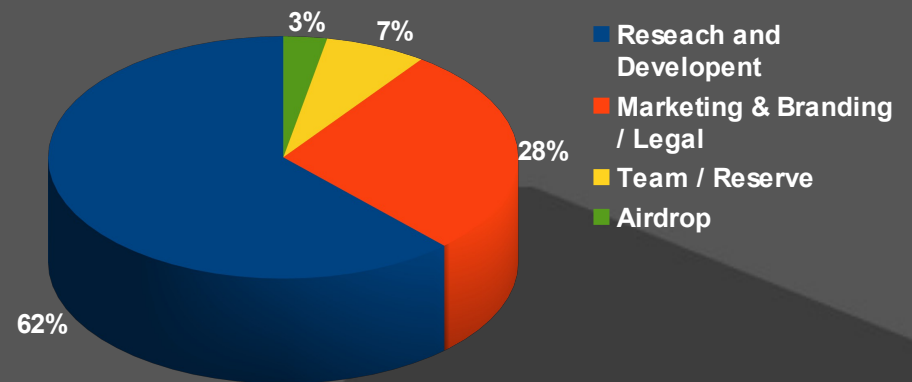

### Research and Development

- Founding of FingerSnap.org GmbH Headquarters Germany (equivalent to ltd) - 25%
- Server Costs – 1.5%
- Personnel Costs - 57.5%
- Adviser / Freelancer - 16%

### Marketing / Branding / Legal

- Extend Branding - 11%
- Multiple Social Media campaigns – 78.3%
- Notary – 6.7%
- Lawyer - 4%

## \$FST Token Distribution

# Token Economics

## Token Information

- Platform: Neblio (NTP1)
- Name / Ticker: FST
- Description: FingerSnap Token

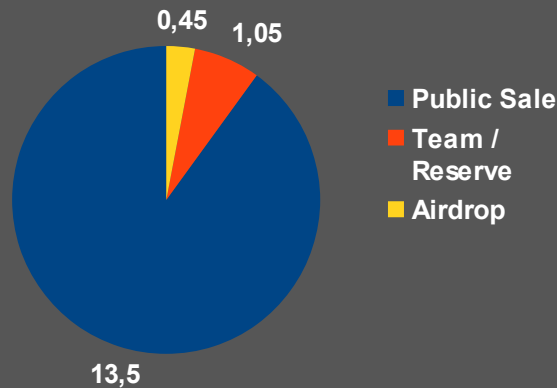

## Token Blockchain Data

- Token ID:  
LaA4inc6DjgXjQprhftnyL4YrihSSsGdWJnCeR
- Issuance Address:  
Na6xao6aZQ2Z5kN4poQQDv1Bxw6cwggugw
- Issuance Txid:  
9ac95d22c01a3171055256858654e99616223c5d5c6f1832eddb37e78ff31ce5

## Supported wallets:

1. Orion Wallet
2. Raspberry Pi Wallet
3. Docker Wallet
4. Core Desktop Neblio Wallets (for Windows, Mac OS, Linux)

## Token Metrics in Million

## Token Metrics

- Total Supply: 15m
- Open to Public via Sale: 13.5m (90%)
- Price is fixed at **\$0.024**  $\triangleq$  \$BTC, \$ETH, \$NEBL, \$IMBA
- Blocked Supply: 1.5m  
( 1.05m Team/Reserve)  
(0.45m for Airdrop)

## Funding Goal / Method

- Total: 13.5m FST Token  $\triangleq$  \$324.000
- Softcap : N/A
- Method : IEO / Initial Exchange Offering
- Platform IEO : IMBA-Exchange
- IEO Start : N/A
- IEO End : N/A

# Future Plans / Expansion

- Mobile App
- FingerSnap as Service: API, Easy Intergration
- Finger Snap Wallet. (\$FST Funds will no longer be managed by FingerSnap.org)
- Browser Extension (Google, Firefox)
- Multilingual Support
- And more
